

TGUISS SGH Activity Log 2019

ISS Challenge SGH Section Interim Report Meeting

Jul 15, 2019

Four months have already passed since we started the 1st term this year. We held Interim Report Meeting to share how the project in progress is by each team on Jul 15. We made groups consist of 4 teams from different grades. They asked what the condition of the project is, shared some trouble they need to figure out, and saw how they can develop the project in the future. They were able to receive encouraging feedbacks.

It was just after the term-end exam, so the participants were less than we expected, but students had good impact on each other. Some confessed they had been stuck in the middle of study, but the advice of their seniors led them to the positive attempt during the summer vacation.

Information Session of TGUISS (#1) Project Study Section

Jul.20, 2019

Information Session of TGUISS (#1) was held on Jul.20. At Project Study Section, Both SSH and SGH teams were combined to make presentations and poster sessions. We were glad to see more visitors than the ones in the last year, and at some point, some classrooms were full of people. This year we expanded the poster area, and we asked some teams to demonstrate their experiments to introduce their study to the audience. The most popular one among the elementary school students was the open experiment, "Emitting light by luminol reaction." done by an SSH team. It was a good try, and it made us wonder whether teams of SGH should try to serve those experiential occasion. We are planning the second Information Session in October, and we'll make other presentations again.
